I would like to thank the team at Secure Data Recovery Services for their help in saving important files for our family business.

We used QuickBooks Enterprise Contractor to maintain a database on a 2 TB Seagate BarraCuda hard drive. The software helps manage core aspects of our business. In many ways, truly irreplaceable data was suddenly gone.

We weren't sure what failed, but we needed our data to continue business operations. I reached out to Secure Data Recovery and was able to get a device diagnostic quickly and they immediately started on the recovery.

Thankfully, they were able to recover the database. It was such a huge relief to get that data back quickly.

I can't stress enough how much we appreciated working with Secure Data Recovery. They kept us informed throughout the process, delivered excellent results, and minimized the impact of data loss. I would strongly recommend them to anyone who needs a hard drive recovery service to restore lost files.

Sincerely,

Spencer Bowles of Bowles Construction
